5.	BILL OF QUANTITY	5
6.	OTHER ASSUMPTIONS	6
7.	IMPLEMENTATION SERVICES	7
8.	HARDWARE AND TECHNOLOGY REQUIREMENTS	8
9.	OPTIONAL - SHIFT ROSTER.....	9

1. Background

Naufar is a healthcare sanctuary under construction in Doha, Qatar with its primary focus to treat substance related and addictive behavioural disorders along with services for non-cancer patients with chronic pain and comorbid modifiable disease conditions using an integrative wellness approach incorporating medical, psychosocial and physical approaches. An extensive range of hospitality products will be offered including a spa, a gymnasium, restaurants, a conference centre and meetings rooms all to be supported by a highly personalized level of service.

The vision of Naufar is:

To be recognised as a centre of excellence within 3 years from opening.

The mission of Naufar is to:

Assist people with behavioural disorders to achieve and sustain the quality of life they aspire for, in a healing environment using evidence based practices.

Key features of the sanctuary include:

- Person-centred therapy in a world-class hospitality setting
- Continuum of care underpinned by a therapeutic alliance, tailored to the individual guest's needs and wishes
- Long-term support to aid the transition to a fulfilling and successful personal, family and work life and the achievement of aspirational goals
- Science-based treatment to take advantage of leading-edge developments now and in the future
- Integrated programs offering medical, psychotherapeutic, wellness and self-help interventions
- Multidisciplinary treatment teams and separate programs for men, women and adolescents
- Integrated leading-edge technological systems and solutions
- The highest professional standards will be the hallmark of Naufar services

2. Scope Description

Naufar is seeking Time and attendances software system. Bidder is expected to install, configure and upgrade the existing software.

The new web based Time and Attendance system (T&A) should address the following key functions:-

- Manage all employee Attendance (Clinical and Non-Clinical)
- Workforce Planning (Shift Management)
- Employee Attendance Management
- Migrate historical data to the new system
- Develop and Implement reports as per business requirements
- Real time Integration of Time and Attendance system with Naufar SAP for HR Module
- Shift roster (optional)
 - o Functionality customization and development of shift roster module

Specifications

- Software Web based
- Touch ID finger-based biometrics
- Magnetic stripe card reader
- Proximity card reader
- Wi-Fi, Ethernet and BLE adaptor

3. Key Business Rules

1. All employee are created in the corporate ERP System (SAP S/4 HANA 1610)
2. All leave must be submitted in the corporate ERP System for approval
3. All leave and employee information to flow to Time and Attendance system (T&A)
4. The integration with ERP System will need to be bi-directional based on SAP standard Interface protocols
5. T&A system must cater to capture for planned leave
6. Employee shift includes day, evening and night shift (Ramadan as a fourth shift)
7. The new system should set and configure all the current shifts.
8. T&A should have the capability to calculate overtime
9. If bidder will not propose Shift roster software, the system should cater for
 - a. Interface with external Roster system and allow for upload of roster.

4. Current Equipment and System

- Biometric machine
 - Grandng TFT600 x 2
 - Grandng H0201 Multimedia Fingerprint x 3
- Software

Fingerprint Attendance System. Version 4.8.8
Build : 157-4003-04 SDK Version: 6.2.5.7
- **Bidder must consider to Optimize and utilize the existing system/hardware that naufar has.**

5. Bill of Quantity

Item	Qty	UOM	Unit Price	Total Price
1. Time and attendance software				
(a) Biometric device	4	Ea		
(b) Time & Attendance Software	1	Ea		
(c) SAP Integration	1	LS		
(d) Shifts Roster (optional)	1	LS		
2. Additional Devices (optional)	1	Ea		
Total Quote price				QAR

6. Other Assumptions

1. Bidder to quote for four (4) Biometric Machines (this number should be updated if the current hardware can be utilized with the proposed solution)
2. Additional Biometrics devices should be quoted optional
3. BIDDER is required to supply maintenance and support
4. BIDDER is required to provide full BOQ
5. Bidder must describe the required Naufar obligations during the implementation
6. Bidder must provide service level and turnaround on fixing any issues related to the system supplied
7. Bidder must describe the detail scope of maintenance and support services
8. Bidder must describe the data protection and archiving process.
9. Bidder must describe the procedures and tools to restore and backup the system.
10. Bidder must comply with the standard data privacy, data security and protection guideline.
11. Bidder shall be required to sign the confidentiality agreements.
12. Bidder must provide support for further developments and enhancements to the solution.
13. Bidder must provide solution release and deployment process (including upgrades and patch management).
14. Bidder must provide detail description of the maintenance process, maintenance durations and downtime durations.

7. Implementation Services

Implementation services include all services required to deliver the required functionalities.

Design

- Supplier must complete a site survey to Naufar Center to estimate the bill of quantities.

Testing

- Supplier shall submit testing methodology.
- Supplier must prepare testing plan in advanced and obtain sign off from Naufar Testing plan must include testing approach, test scripts, testing schedule, acceptance criteria and other sections as needed.
- Suppliers will execute testing and Naufar assigned project team members.
- All testing must be signed off by named functional experts of Naufar.

Training

- Supplier shall submit training/knowledge transfer methodology together with this response.
- Trainings scope must include all the necessary trainings such as end users, super users, functional and technical
- Supplier must conduct all the trainings at Naufar premises in person.

Go Live and stabilisation

- Stabilisation shall include immediate bug fixings and issue resolution for all major errors and issues. The stabilisation phase is not to exceed one-month post go live date.

8. Hardware and Technology Requirements

Servers Operating System

- The proposed system must be based on Microsoft Operating System at least Microsoft Windows Server 2012 R2.

Virtualization

- The proposed system must support virtualization on VMWare
- Supplier must supply virtual server requirements including number of servers, virtual processors for each server, memory for each server, storage requirements for each server, Operating System for each server, architecture diagram for the system servers in virtualized environment, backup requirements, and high availability scenarios in virtualized environment.

Storage and database

- Supplier must supply storage requirements including space and I/O requirements on the consolidated storage area network for virtualized servers
- Supplier must supply database requirements including model, manufacturer, and storage space requirements.
- Supplier must implement the Database.

Single Sign On (Optional)

- The proposed system Sign On needs to be integrated into the corporate Active Directory (Single Sign On)
- Supplier must provide description on how to integrate system Sign On into Active Directory.

9. Optional - Shift Roster

Each unit head will prepare the staff roster 5-10 days before the month's start.

1. Currently eight Clinical units(scalable to more units in the future) available at the Naufar Center are

Mandatory Business Rules

1. Each unit head will prepare the roster for his / her unit
2. 10 days of forthright and 4 days off on a 8 hours shift
3. 8 hours break between shifts for 8 hours shift pattern
4. Roster with version control
5. HDO\Supervisor should be able to override any rule
6. Ability to create split shift (e.g. Ramadan has an extra shift)
7. Rotating roster for all staff (Morning, evening and night shift)
8. System should be to change from and to 8 , 10 and 12 hours shift and calculate the total amount of hours to be 80 hours forthrightly
9. System should be able to create roster exceptions
10. System must accommodate for certain conditions (e.g. Minimum and maximum per category)
11. Total number of staff should be able to be adjusted
12. To swap between the employees user will click on the corresponding shift and choose the staff from other shift / week off. Once the swap is confirmed, the email will be triggered to the corresponding reporting managers
13. Based on the reporting manager's approval, the swap will be applied on the roster
14. Publish of Roster
15. Ability to add or create more units with its own shift roster
16. Be able to add comments over resources e.g. 1st in call and 2nd in call
17. Scheduled hours and overtime calculations tracking
18. The staff roster should display the approved leaves and the public holidays
19. The staff roster should be generated based on the staff approved leave plan and the unit's requirements
20. The staff roster should be linked with the Time Attendance System
21. Approval of Roster plan
22. System has the facility to capture overtime and differentiate between approved overtime and extra time worked in favour of pending time off) (may be a manager's approval rule)
23. Optional features, 1st in call and 2nd in call should be displayed.
